 **Email address:** M_WorkEmail_987@proton.me

 **Home:** (Romania)

ABOUT ME

I am a dedicated and passionate person in the IT field, seeking opportunities that will allow me to deepen my knowledge and gain experience. I want to actively contribute to projects and grow professionally in a dynamic environment. I am motivated by the desire to achieve set goals and earn a satisfactory income, while also being open to new challenges and committed to continuous development in my career.

WORK EXPERIENCE

 **Nextlab.tech** – Bucuresti, Romania

Embedded Programmer

[02/2020 – 07/2020]

During my internship at Nextech Lab, I gained hands-on experience in assembling and programming educational robots as part of a team focused on introducing robotics to younger students through structured workshops and guided activities. I contributed to the setup, maintenance, and testing of robotic kits, and collaborated on developing simple, logic-based programs to control robotic behavior and demonstrate core concepts in automation and movement.

In addition to my technical responsibilities, I served as a teaching assistant for students in grades 2 through 6. I guided them through both the hardware assembly and software programming process, adapting explanations and support based on each student's age, prior experience, and learning style. This required patience, clear communication, and the ability to break down complex topics into intuitive, relatable ideas.

The internship significantly enhanced my problem-solving mindset and improved my understanding of how hardware and software interact in real-world applications. It also strengthened my ability to communicate technical information in an accessible and engaging way—an essential skill when working across teams or with non-technical audiences. This experience laid a strong foundation for future work in robotics, education, and user-focused development.

 **Ipsos** – Bucuresti, Romania

Software Developer

[10/2021 – 01/2023]

As part of the Research & Development team at Ipsos, I played a key role in building and configuring dynamic, client-specific surveys using Dimensions Scripting Language (DSL), while also integrating modern web technologies such as JavaScript, TypeScript, and React where needed for enhanced UI components and internal tools. I was fully responsible for implementing a complex survey from a major client, ensuring all logic, flow, and question structures were precisely aligned with their technical and business requirements. I often worked across multiple projects simultaneously, balancing shifting priorities and adapting to evolving client needs. This helped me build strong organizational and time-management skills.

Working closely with the project manager, I handled direct communication with clients to translate their needs into functional survey logic. I also coordinated with the internal team to track progress and ensure timely delivery in line with Ipsos's quality standards.

Beyond survey development, I supported Quality Assurance by reviewing and applying feedback from the QA specialist, and by rigorously testing the survey using dummy data and randomized inputs to ensure logic correctness and data integrity. This included monitoring the test database to confirm accurate data insertion and verifying that conditional question flows responded correctly to user input.

Additionally, I contributed to internal tooling and analytics workflows, applying data science concepts to validate survey logic and optimize data structure for downstream analysis.

Full stack Developer

[08/2024 – 11/2025]

As a freelance full-stack developer, I have independently delivered end-to-end web applications for various clients, managing both front-end and back-end development. I build dynamic user interfaces using Vue.js, React.js, TypeScript, JavaScript, HTML, and CSS, while developing robust back-end services and RESTful APIs with Spring Boot, Python (Flask/Jinja), and C#. My work encompasses the full project lifecycle, from architecture and coding to testing, deployment, and maintenance. Collaborating directly with clients under B2B contracts, I gather and translate business requirements into customized, scalable solutions, ensuring responsive design and cross-browser compatibility. I follow Agile methodologies and use version control to maintain code quality and facilitate team collaboration.

 **Huawei Global Service Center Romania** – Bucuresti, Romania

Software Developer

[12/2025 – Current]

Currently at Huawei Global Services Center Romania, I work on dashboard development, data visualization, and process automation to support smarter decision-making. I have experience working in a team, collaborating on projects, and applying analytical problem-solving to deliver practical solutions. I am passionate about programming, data processing, and leveraging technology to optimize workflows and reporting.

During my time at Huawei, I have worked with multiple platforms and technologies to develop dashboards, automate processes, and integrate data solutions.

Using Vue.js in the Global Development Environment, I built interactive dashboards that display and monitor project data. I integrated APIs to fetch and visualize information, ensuring accurate real-time insights.

In the Global Development Environment, I also developed Python Functions as a Service. I wrote scripts to process data and interact with APIs, extracting essential information from received Excel files, configuring outputs for further API calls, sending data to custom dashboards or platforms, and exporting processed data as Excel files for clients.

With WeAutomate Robotic Process Automation, I created automation scripts in WeAutomate Studio, deployed them to the Global Development Environment and WeAutomate Orchestrator, and executed them on designated machines with WeAutomate Executor. These workflows run automatically in the production environment, and I monitor their execution, troubleshoot failures, and ensure reliable operation.

Using DataFab and DataLink, I built dashboards and data processing pipelines by writing SQL queries and creating custom forms. DataLink allowed me to collect specific data through forms, which I then processed and visualized in DataFab dashboards, following platform rules and templates.

EDUCATION AND TRAINING

Bachelor's Degree in Economic Computer Science

Academy of Economic Studies, Faculty of Cybernetics, Statistics, and Economic Informatics

City: Bucuresti | Country: Romania | Website: <https://csie.ase.ro/programe/informatica-economica/> | Level in EQF: EQF level 6

Master's Degree in Software Engineering and Data Systems

University of Bucharest, Faculty of Mathematics and Computer Science

City: Bucuresti | Country: Romania | Website: <https://fmi.unibuc.ro/> | Level in EQF: EQF level 7

LANGUAGE SKILLS

Mother tongue(s): Romanian

Other language(s):

English

LISTENING C2 **READING** C2 **WRITING** C2

SPOKEN PRODUCTION C2 **SPOKEN INTERACTION** C2

German

LISTENING A2 **READING** A2 **WRITING** A2

SPOKEN PRODUCTION A2 **SPOKEN INTERACTION** A2

Levels: A1 and A2: Basic user; B1 and B2: Independent user; C1 and C2: Proficient user

SKILLS

Databases / Database Management Systems / Database Security / Data Warehouse / Oracle DBMS / Oracle SQL, PL/SQL / SQL/(MySQL) / Algorithms, Data Structures, and Programming Techniques / C and C++ Programming Languages / C# Programming Language / Windows Application Programming / OOP- Object-Oriented Programming / Clean Code / Design Patterns / Software testing knowledge / Unit Testing / JUnit - Testing / React, React Native / Vue.JS / Mobile App developer (iOS&Android) / UML diagrams Visual Paradigm / UML/BPMN / Material-UI / Google Firebase / SAS Programming / Python Programming Language / Python (pandas, numpy) / Genetic Algorithms / Data Analytics & Data Mining / Big Data / Machine Learning in Python / Apache Spark / Spark / PySpark / Spark SQL / Machine Learning Tensorflow PyTorch / Jupyter Notebook - Anaconda / Google Colab / Html / CSS / Javascript / Web Technologies / Web Application Development / Node.js, Express.js, Sequelize / Java Programming Language / Model-View-Controller (MVC) / Axios / Spring Boot / Spring MVC / Thymeleaf / Spring JPA / Data Encryption Algorithms / Assembly Language / Cloud Computing / GoldenGate Replication / Microsoft Word, Excel, Power Point; Outlook Express / Microsoft Teams Microsoft Sharepoint / Information Technology
